Why is the vaccination for those aged 18 years and above only?

Currently, clinical trials that have been conducted are for volunteers aged 18 and above. Several vaccine companies will be conducting clinical trials on children. As such, the Government will consider the use of the COVID-19 vaccine in children when there is scientific data that proves its effectiveness and safety to those in this age group.

Success of COVID-19 vaccinations in the world

Countries that have initiated COVID-19 vaccinations have shown positive developments such as a decline in new COVID-19 cases in their respective countries. For example, a country that has vaccinated 600,000 of its residents has reported that the effectiveness of its vaccination has shown a 94% reduction in COVID-19 infections in the group.
